

Instructions for Allowing Celestial Tools To Be Used with Norton 360

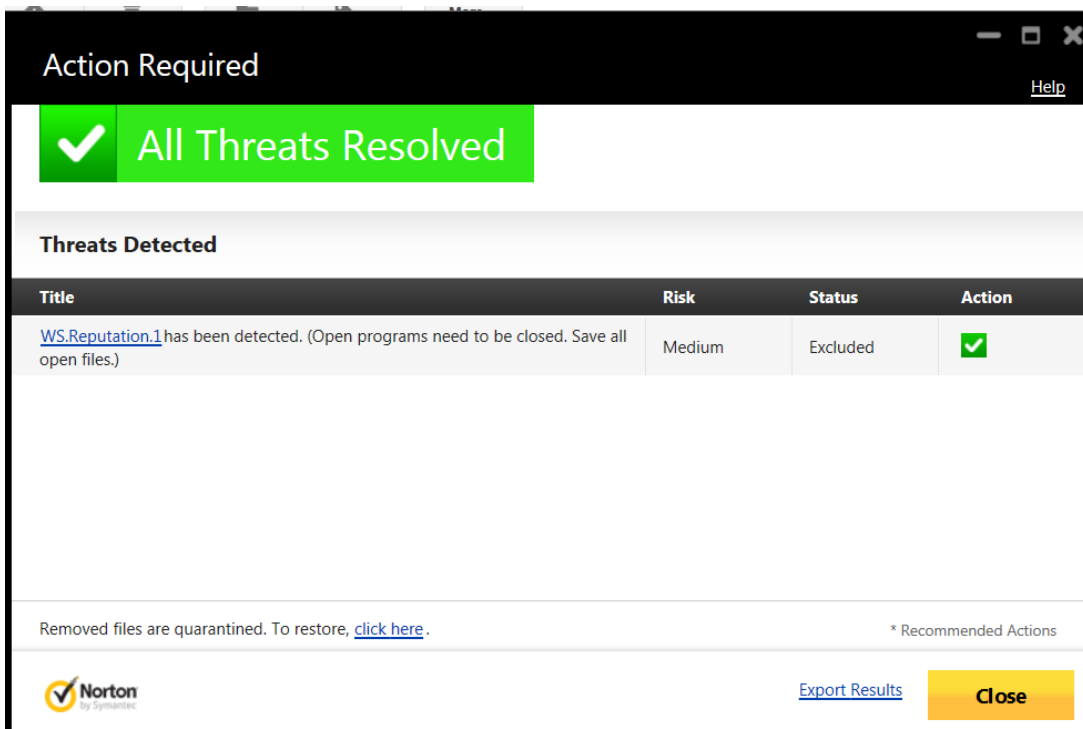

When the threat is detected, the first screen below will appear. In it there is a dropdown under "Action", where the selection shown is "Fix*". Click the dropdown and select "Exclude", then click on "Go". The second screen below should appear, indicating that the threat has been resolved

The screenshot shows a window titled "Action Required" with a red banner that says "Threats Detected". Below the banner is a table with the following data:

Title	Risk	Status	Action
WS.Reputation.1 has been detected. (Open programs need to be closed. Save all open files.)	Medium	Not Attempted	Fix* Go

At the bottom of the window, there is a note: "Removed files are quarantined. To restore, [click here](#)." and a footer with the Norton logo, "Export Results" link, and "Close" and "Apply All" buttons.

The screenshot shows the same "Action Required" window, but now with a green banner that says "All Threats Resolved". The table below the banner has been updated:

Title	Risk	Status	Action
WS.Reputation.1 has been detected. (Open programs need to be closed. Save all open files.)	Medium	Excluded	✓

The rest of the window, including the note and footer, remains the same as in the first screenshot.
