

How To Install MQ Series Client

The first thing that you will need to do is to download the MQ Series Client software from the DB2000 Downloads page.

- Open DB2000
- Click the Help Button
- Click the Online Help menu
- Click DB2000 Updates selection

The DB2000 Updates option brings up the DB2000 Downloads page in your web browser.

DATABASE MANAGER

United States Power Squadrons® 2000

DOWNLOADS

[Back to Table of Contents](#)

This section provides descriptions of, and access to, the various DB2000 downloads. With the exception of the DB2000R3.EXE download, the RepWiz.Zip download, and the Jet Engine downloads, all other downloads are designed to be saved in the DB2000V3 directory replacing the current file.

Zip files are compressed files which need to be "unzipped".
In the Windows File Manager, right click on the zip file and select "Open in a new window" from the pop-up menu.

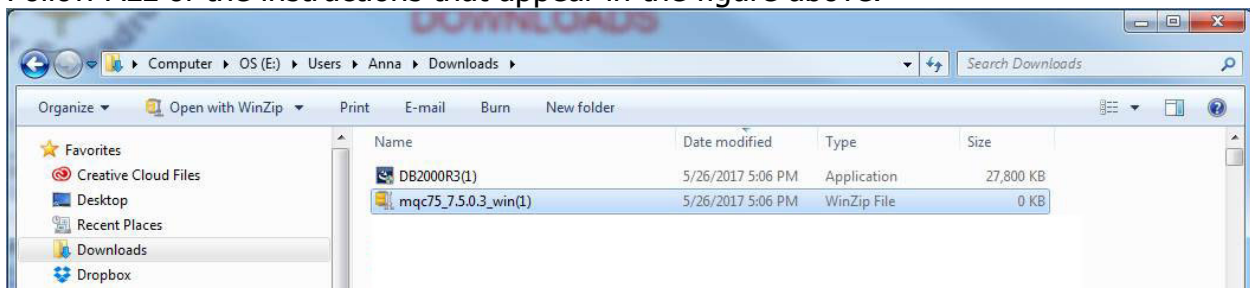

File Name	Explanation	Dated	Links

The MQ Series Client software is located on the 2nd row of the file grid. Take the time to read the instructions provided in the Explanation Column. When ready, click on the link, "Download the Version 7.5.0.3 MQ..."

MQ Series Client	<p>The MQ Series Client is an independent, totally separate piece of software, developed by IBM, and used by DB2000 to communicate directly with the HQ Computers.</p> <p>This direct communication capability enables real time generation of roster files and real time application of roster updates.</p> <p>Download and save the file to a folder on your computer remembering where. You cannot run it from your web browser even if it offers to do so.</p> <p>The file is a zip archive and needs to be extracted.</p> <ol style="list-style-type: none"> 1. Open Windows Explorer (not your browser). On your keyboard, hold the Microsoft flag key down and press E. 2. Find the file that you saved "mqc75_7.5.0.3_win.zip" 3. Right click on it and select "open in a new window" from the popup menu. 4. In the new window open the folder named "Windows" 5. Look for the file "Setup.exe" 6. Double click on this to run it. 7. Follow the on screen instructions. 8. After the installation is finished you must restart your computer. <p>Once you have installed the MQ Series Client and have it working, there should be no reason to uninstall and reinstall it, unless you are changing your operating system or your hard drive has crashed.</p>	N/A	Download the Version 7.5.0.3 MQ Series Client for ALL Windows systems including Windows 7, 8 and 10
------------------	--	-----	---

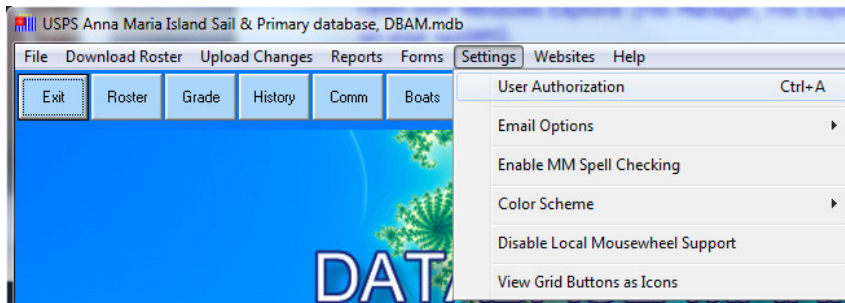

Close the web browser, DB2000 and any other programs that you have running. Open your Windows Explorer (File Manager, File Explorer or whatever it may be called on your system).

Navigate to your Downloads folder and locate the file mqc75_7.0.5.3_win. Follow ALL of the instructions that appear in the figure above.

Once your machine has restarted and Windows is back up, re-open DB2000.

Make sure that you have entered and saved your squadron password. From the "Settings" button select "User Authorization".

Authorization - User ID **Cert. No.**

Select user's name from the dropdown list or type user's certificate number in the box. If missing or incorrect type email address below.

Enter user or updater password for:
Anna Maria Island Sail &
(8 chars max)

Check if you have updater rights

Type Password For Merit Mark Submission.
(8 chars max)

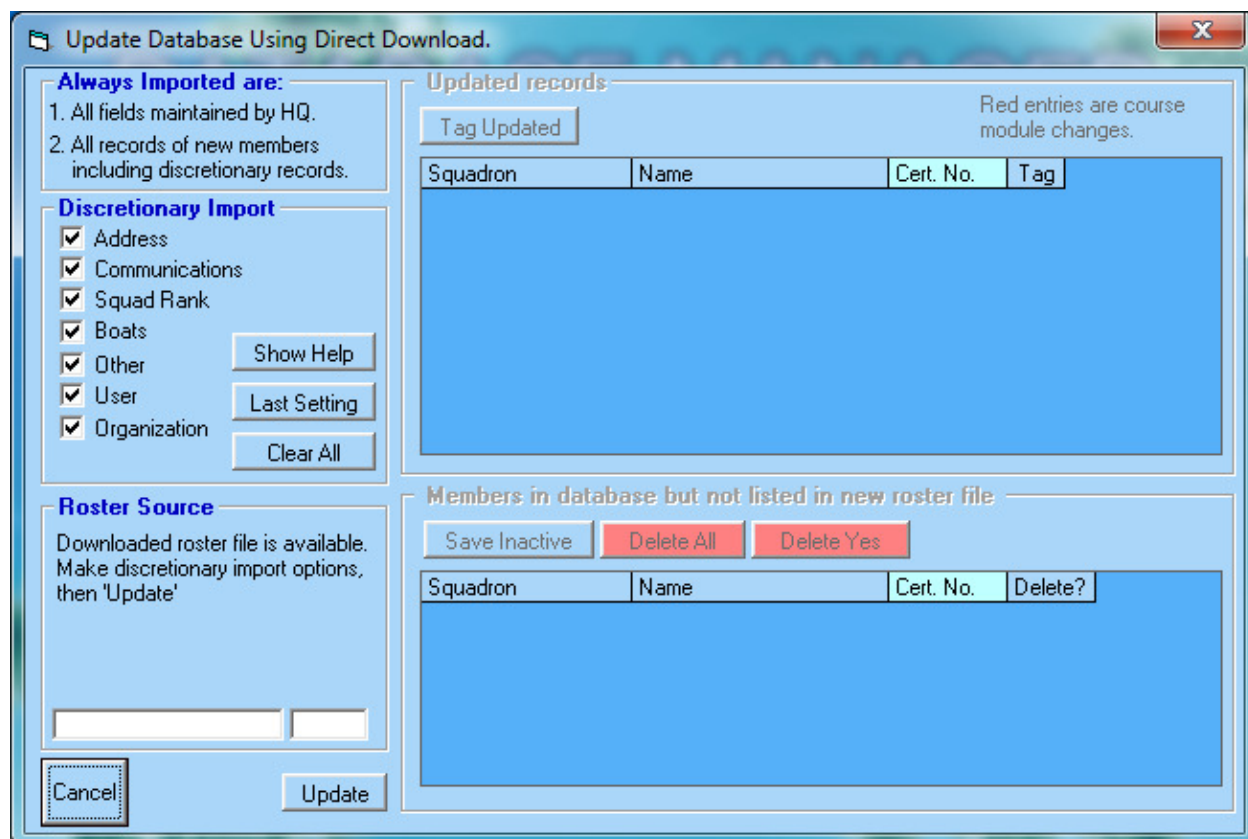

After entering the requested data, click "Save", this closes window.

Click on the Download Roster button.
 Click on the Use MQ Series option.

A small status window in the lower left corner of the DB2000 screen will keep you advised, but downloads are usually completed in approximately ten (10) seconds.

Once the roster data has been downloaded, the following screen appears in the middle of the DB2000 splash screen.

Although there are several options you may use to control the way your update is applied, all really you need do is click "Update".
